## PRESS RELEASE

### FOR IMMEDIATE RELEASE

*Cimco-GC Systems now represents Waterman engineered products in Washington, Oregon and Alaska, expanding specialty valve offerings to include Waterman's trusted slide and sluice gates.*

**Puyallup, Washington – January 16, 2024:** Effective January 1, 2024, Cimco-GC Systems is now representing Waterman's engineered products in Washington, Oregon and Alaska, and is the point of contact for all Waterman engineered products, pricing and design support.

Waterman is one of the original American slide-gate valve manufacturers and has been trusted in the water control industry for over 100 years. They are recognized as a leading provider of gates, valves, automated controls and accessories for water treatment, wastewater, high-volume agricultural and rural surface water delivery, hydropower and flood control management.

Waterman's water control products include fabricated sluice and slide gates (in stainless steel, aluminum and cast iron), butterfly gate valves, radial gates, mud valves, canal gates, flap gates, stop logs/bulkhead gates, tide gates, weir gates and automatic level control gates.

Cimco-GC Systems has been serving the Pacific Northwest with control valve products and support services since 1981. "Representing Waterman is about offering our regional partners more solutions – and providing the same support and service they've always counted on," says Cimco-GC Systems President, Raeann Velasquez.

In addition to product questions and pricing inquiries, Cimco-GC Systems offers technical design support for engineers and is available to host training events for teams interested in learning more about Waterman's product lines.
